

Why Databricks runs

on

October

Accelerate time to value by migrating Big Data workloads to Azure Databricks

Chapter 1:

Be first to value with
Azure Databricks

Chapter 2:

Integrate seamlessly into
the Azure ecosystem

Chapter 3:

Collaborate securely and
access your data anywhere

Speakers:

Arindam Chatterjee
Principal Group Product Manager,
Microsoft

Premal Shah
Principal Program Manager,
Microsoft

Chapter 1

Be first to value with Azure Databricks

Arindam Chatterjee
Principal Group Product Manager,
Microsoft

Big data workloads need robust support

Scale

Performance

Optimization

Azure Databricks is the only first-party service for Databricks

Scale

Performance

Optimization

Unique engineering partnership

Azure ecosystem

Native security, identity, and compliance

Ease for commerce

Rapid onboarding

Azure Databricks

Microsoft and Databricks engineering teams are aligned to accelerate customer success

- ✓ Strong joint engineering partnership
- ✓ Streamlined product optimization
- ✓ Consistently integrated experience for customers
- ✓ Azure is the first to get the latest and greatest features

Unique engineering
partnership

Customer Story – LMK Group

Challenge

- Build an experimental, predictive food ordering and delivery system that **reduces food waste to 1%** (15-20% is normal in a typical grocery)
- Develop a **robust, experimental model that intakes data** from past orders, upcoming orders, and growth forecasts
- **Translate data into meaningful predictions** for produce growers so they can plan planting schedules that minimize food waste

When a merger doubled the company's size, **its existing cloud infrastructure no longer sufficed**, so LMK Group moved to Azure

Solution

- **Azure Databricks was chosen as the model training entity** because it offers the ability to **serve once-a-night model scorings** and live scorings for future models
- LMK Group built a complete stack with the model hosted and run on Azure Databricks, while APIs trigger and harvest results

Chapter 2

Integrate seamlessly into the Azure ecosystem

Premal Shah
Principal Program Manager,
Microsoft

Backed by Azure

Utilize all Azure services to offer:

Azure Databricks is a **first party** service on Azure.

- Unlike with other clouds, it is not an Azure Marketplace offering or a 3rd party hosted service.

Azure Databricks is integrated seamlessly with Azure services:

- Azure Portal
- Azure Storage Services
- Azure Active Directory
- Azure Synapse Analytics and Azure Cosmos DB
- Apache Kafka for HDInsight
- Azure Billing
- Azure Power BI connector

Enterprise users need to create a separate account with Databricks.

Chapter 3

Collaborate securely and access your data anywhere

Arindam Chatterjee
Principal Group Product Manager,
Microsoft

Challenges of Securing Data and AI Projects

Fragmented security

Poor reliability

Fragmented governance

According to enterprise executives and data experts, the biggest barrier to effective use of data and analytics is a **perceived lack of security.**

Enterprises want:

- ✓ Simple identity workflows
- ✓ Guaranteed customer-controlled data protection
- ✓ Network customization
- ✓ Trusted compliance certifications

Private, secure, encrypted with
compute in your network

Plug into your identity system
for seamless control

Network Security

Identity and Access

Compliance

Data Protection

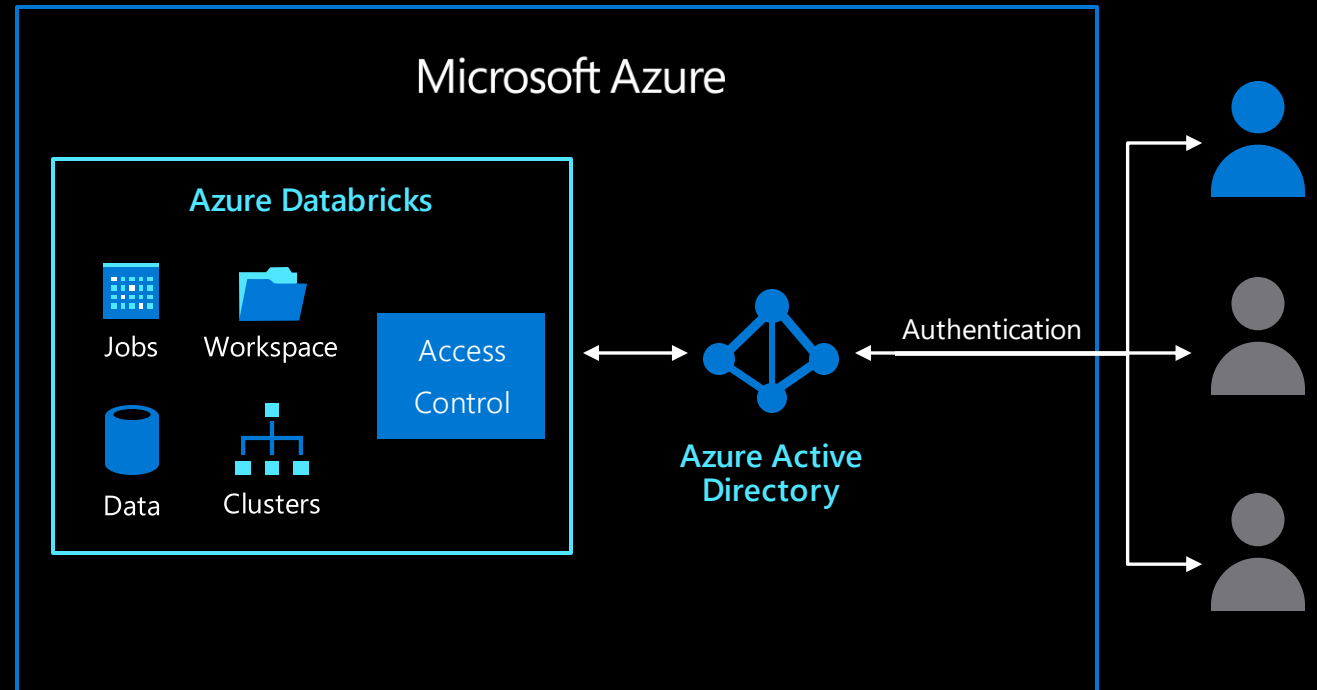

Battle tested for compliance and
other sensitive data policies

Extend identity all the way
down to the data natively

Azure Databricks integration with AAD

Azure Databricks is integrated with AAD—so Azure Databricks users are just regular AAD users

- No need to define users and their access control separately.
- AAD users authenticate directly into Azure Databricks for user-based access control.
- Databricks integration with AAD enables single sign on (SSO), and unified authentication.

Secure collaboration

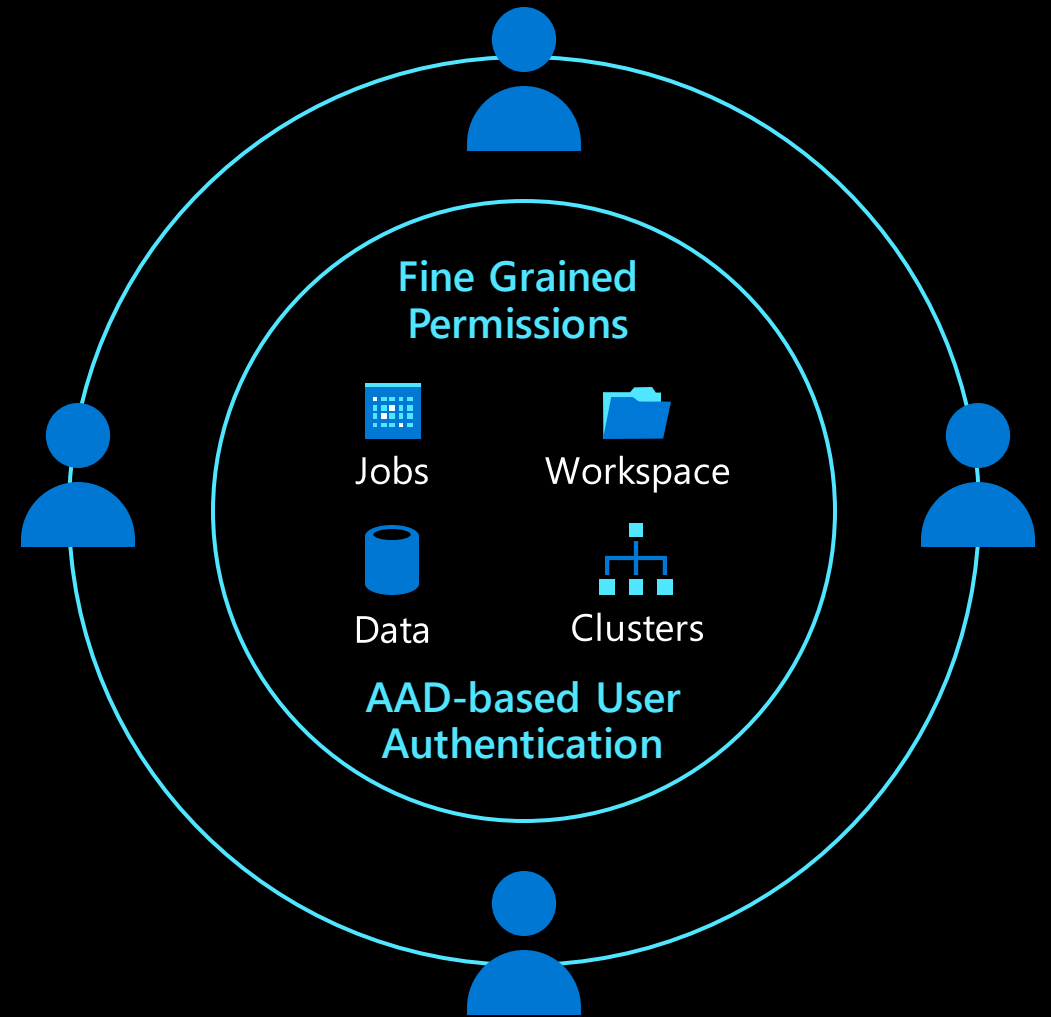

Azure Databricks enables secure collaboration between colleagues

- With Azure Databricks, colleagues can securely share key artifacts such as Clusters, Notebooks, Jobs and Workspaces
- Secure collaboration is enabled through a combination of:

Fine grained permissions: Defines who can do what on which artifacts (access control)

AAD-based authentication: Ensures that users are who they claim to be

Unified Analytics on Azure Databricks

managed
VNETs

Control plane
designed to scale
beyond enterprise
needs

The data plane runs
in enterprise
governed
infrastructure

Data always stays in
enterprise data
sources, no transfer
of data needed

Summary

- Secure by design
- Azure Databricks has you covered
 - ✓ Network Security
 - ✓ Identity and Access
 - ✓ Data Protection
 - ✓ Compliance

Customers using Azure Databricks experience continual ROI throughout the journey

Up to **417%** ROI over 3 years

▲ **\$9.9M**

Incremental profit with improved ML models

▲ **5%**

Increased revenue through faster data science outcomes

▲ **25%**

Faster time to market with improved data productivity
